

an NTT DATA Company

The background of the slide is a photograph of a city skyline, likely Hong Kong, with a person sitting on a rooftop in the foreground, looking out over the city. The image has a blue and green color grade. Overlaid on the image are several white, glowing, circular lines that spiral outwards from the center, suggesting a digital or technological theme.

Project Examples

Strategic planning project

Context

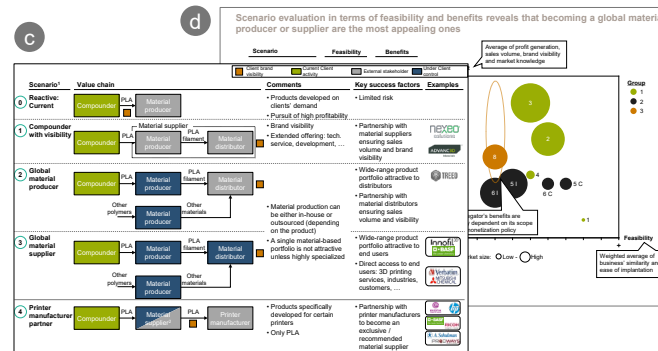

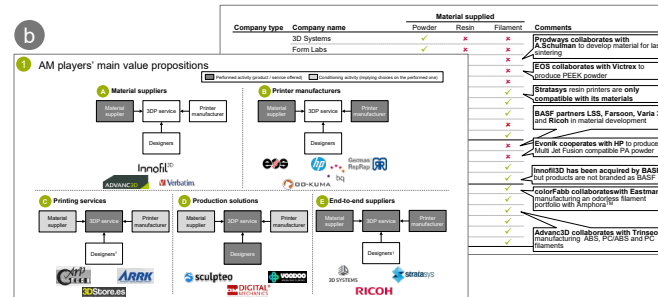

Plastic manufacturer specialized in a certain polymer production for automotive, healthcare, consumer goods...

This manufacturer partnered with everis to explore the business opportunity for in the additive manufacturing industry.

Challenges

After a period of steady growth and consolidation as a global reference player in plastic manufacturing, our client was thinking about leveraging their specialist knowledge to enter into the additive manufacturing market, thus the key questions to answer were:

- Is there an actual business opportunity in additive manufacturing?
- If so, which role should they take in this market?

Results

The analysis of the business opportunity in the additive manufacturing was made of:

- **Internal analysis:** company's value proposition and capabilities, aspiration in the additive manufacturing business and challenges
 - **External analysis**
 - a. **Demand analysis:** sizing of current and future market segments
 - b. **Offer analysis:** review of the value chain and competitive landscape, identifying the current relevant players, their value propositions and their key success factors
 - c. **Diagnosis**
 - c. **Definition of the potential business scenarios**
 - **SWOT analysis** for each scenario
- which resulted in **2 final outputs:**
- d. **8 business scenarios and revenue potential for the client** in each of them
 - **Selection of the most adequate scenario**, of which the business plan should be developed in a further phase

Project Examples

Technological project

Context

Mediacoach is a scouting platform for coaches of LaLiga that allows to exploit tracking data, videos and statistics of the games.

Challenges

Development of the commercial web and an user portal with online access to the statistics repository of the games. This solutions would allow to:

- Transform the most relevant information in different qualitative analysis that helps to get a better understanding of the matches.
- Generate pre-game, post-game and accumulative reports with physical and tactical data.
- Add new metrics and indicators that allow the game analysis and the performance in an easy and intuitive way.

Technologies

Angular, NET Core, NodeJS, RabbitMQ, Microservices, AWS and Google Analytics
